

Summary-

For uninterrupted business, there is a need for secure infrastructure. Without security no matter how well the infrastructure has been planned it is bound to create issues at some point. The sooner the organization builds walls of security the easier it will be to avert any possible threats. VPS Global had several security issues that needed to be attended and solved urgently. Konnet stepped in as an expert technical partner to provide comprehensive solutions solving all the challenges at once. With solutions such as secure cameras, customized PLC based panic System, Fire and intrusion system and much more the campus of VPS Global was threat free.

Challenge-

Expansion of business and growth also comes with numerous problems that can stop an organization from functioning fully interrupting business at various stages. VPS Global faced similar problems with security that reached a point where they had no choice but to outsource and partner technical partner. The problems were innumerable and of various types. There was no control in terms of vigilance and monitoring of the walk-ins, the fire security, communication and interaction records, door control systems throwing open the campus as a breeding ground for malware, intrusions, and security threats to thrive.

Solutions-

Being one of the leading organisations in Networking, Konnet's years of experience and expert team understood the problem after quickly studying the nature of loop-holes that VPS Global campus had. Konnet offered the following services- It solved the problem with installing the following

- Customised PLC based Panic System (32 inputs and 2 responders)
- Total 183 Cameras (indoor and outdoor)
- Counter Communication system to record conversation between the applicant and staffs
- 28 doors controlled by Honeywell Access Control System
- Fire & Intrusion system (smoke detectors, PIR sensors)

This facilitated the following –

- Secure Campus at all times
- Monitoring of walk-ins and outside parties that weren't a part of the organisation
- Recorded conversations kept a vigil eye on exchange of information
- Fire alarm and aversion in case of threats
- Access control systems set-up a 24 hours technical guarding to make sure there are no unwanted intrusions and threats
